Hi Ms. Yeh,

That 2007 data will be of great help. Thanks for working to get that online! On another note, is there any meta data for these data sets? I would want to make sure that I know where these measurements are referenced to.

Thanks again for your help,

Chris

Sorry for the delay in my response. There are bathymetric data from 2007 – we are working on getting it posted on ourPassaic (probably in a few weeks).

Subject: Passaic River Bathymetrics

Greetings Ms. Yeh,

I talked to you at the last CAG meeting in Newark regarding mapping the Passaic River and cores from the river. I'm hoping to map how much change is happening on the river bottom and what implications that would have for the surface pollution levels over time.

Using the ourpassaic.org website, I've been able to access core data from 2006, 2007 and 2008 as well as bathymetric data from 2010 and 2012. Though this bathymetric data is helpful for mapping changes in the river, it does not show what the river looked like when the cores were taken.

Is there any bathymetric data from 2006-2007 that would be available to use in this mapping? If there is, is there a way I would be able to access it?

Thank you for your time and help.

Sincerely,

Chris Kok
